

# Instructions Evolve

To see the model in their proper position, the RFA file must be put into a project (.RVT), otherwise, all objects appear simultaneously (both low-and high-detail models of all objects, high and low socket on the door, windows and wood paneling in the openings, etc.).

When the selected family is in a project you can change the detail mode between course / medium and fine, and change the "Element Properties" if it should be low-or base, glass or wooden panel on the front and / or side opening.
